Subject: Decomposter

Dear Maurice and June

Greetings and thank you again for your time and expertise in assembling our Joraform composter.

I am happy to report that the first week of using our Green Genie has been positive and beneficial on a number of levels.

There is a whole new attitude among our staff with regards to caring for the environment. Outside our kitchen we now have containers dedicated to the collecting of plastics as well as cardboard and paper.

With particular reference to the Composter I am happy to say that at the end of the first week our first chamber is at about 80% capacity. I am amazed as to how much wet waste we have been discarding and am delighted at the full cooperation of our staff who make certain that all wet waste is cut into small portions to assist with a more rapid decomposing. On opening the chamber yesterday I was struck by the immense heat that is being generated and believe that our first load of wet waste is decomposing at a good rate.

I will keep you informed of developments and would be happy to share our experience with anyone who may be interested. Even though we are "infants" having only been using the Composter for one week, I know we are in the process of making a difference to our environment.

Sincerely

Terrence Barnard OMI
